SUMMARY

Performance-obsessed Senior Software Engineer with 3+ years of experience architecting **low-latency, high-throughput trading interfaces and fintech platforms** using React Native, React.js, TypeScript, and Redux. Shipped 12+ production modules — drove a 28% lift in transaction success and cut payment errors by 35%. Proven in leading cross-functional squads, mentoring engineers, and collaborating with leadership to define technical roadmaps. NIT Kurukshetra, CGPA 8.8.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React Native, React.js, Redux, Zustand, Context API, Node.js, HTML5, CSS3, Tailwind CSS, Styled Components

Mobile, DevOps & Infra: iOS & Android (Xcode, Android Studio), App/Play Store Deployment, CodePush OTA, Firebase, GCP, Docker, CI/CD, Git, GitHub, GitLab, Bitbucket, App Center, Microservices

Integration & Domain: RESTful APIs, WebSockets, Real-Time Data Feeds, Low-Latency Rendering, Payment Gateways (UPI, Stripe, Razorpay), KYC/AML, SEBI/RBI Compliance, Fintech, Trading Platforms, Wealth Management

EDUCATION B.Tech in Electrical Engineering — National Institute of Technology, Kurukshetra | 2019–2023 | CGPA: 8.8/10

EXPERIENCE

Senior Software Engineer — ZET (1M+ Downloads), Bengaluru (May 2025 – Present)

- Shipped **12+ fintech modules** end-to-end in React Native — credit card processing, voucher redemption, and payment gateway integrations.
- Single-handedly built the complete UPI payment flow** using **Juspay SDK with headless integration** from scratch, owning the entire lifecycle from SDK setup, error handling, and retry logic through to production deployment across iOS and Android.
- Drove a **28% improvement in transaction success rates** and a **35% reduction in payment errors** platform-wide.
- Cut release cycle time by **25%** by architecting a **modular component system** with reusable libraries and migrating state management to **Redux + Zustand**, enabling the team to ship features with double the velocity.
- Led **cross-functional delivery** across product, design, and backend — **zero critical bugs** in 6+ months of production releases.
- Established **reusable component libraries** and coding standards adopted across all mobile feature teams at the company.
- Provided **technical mentorship** and career guidance to junior and mid-level engineers on React Native best practices, **low-latency rendering optimization**, system design patterns, and network efficiency.
- Collaborated with **engineering leadership to define and execute the technical roadmap** for a scalable, trading-grade platform.
- Owned the full **App Store and Play Store release pipeline** including CodePush OTA updates for instant hotfix delivery.
- Implemented **deep linking and push notification flows** that improved user re-engagement and increased daily active usage metrics.
- Built **robust error tracking and crash analytics** using Firebase Crashlytics, reducing crash rates and improving app stability scores.

Software Engineer — Nuvama (Wealth Management), Bengaluru (Oct 2023 – Apr 2025)

- Built and owned the **core React Native trading app** used daily by relationship managers and wealth advisors to manage high-value client portfolios, execute **live market trades**, and monitor real-time financial data.
- Handled **real-time financial data feeds** with sub-second rendering, processing lakhs in daily transaction volume.
- Architected **KYC/AML onboarding verification** and **SEBI/RBI compliance automation**, cutting manual review time significantly.
- Integrated **UPI, Stripe, and Razorpay** into a unified payment pipeline and streamlined portfolio rebalancing workflows that advisors previously managed manually through spreadsheets.
- Built responsive, **pixel-perfect UI components** from Figma designs, ensuring consistency across iOS and Android devices.
- Set up **CI/CD pipelines** that moved deployment frequency from **bi-weekly to near-daily** with fewer rollbacks.
- Optimized **state management and network calls** to reduce app load time and improve perceived performance for advisors.
- Translated complex technical challenges into **actionable plans for product stakeholders** and non-technical leadership.
- Debugged and resolved **critical production incidents** with real-money impact, ensuring zero downtime during market trading hours.
- Conducted **rigorous code reviews** and introduced pull request standards that improved code quality and reduced post-release defects.

Software Engineer — Lio (1M+ Downloads), Bengaluru (Jan 2022 – Aug 2023)

- Engineered core features of Lio's **data automation platform** using React.js, React Native, and Redux, serving **1M+ active users** worldwide.
- Built and optimized **GCP serverless functions** powering real-time data sync, scalable API performance, and event-driven workflows.
- Directly contributed to scaling the platform past **1,000,000 Play Store downloads** with measurable gains in user retention, daily active engagement, and overall platform adoption during a rapid high-growth phase.
- Reduced **API response times** by refactoring client-side data-fetching architecture and implementing efficient **caching strategies**.
- Designed **reusable UI component libraries** that standardized the frontend codebase and accelerated feature development velocity.
- Improved **user retention and session duration** by optimizing navigation flows and automation-driven data processing pipelines.
- Worked in a fast-paced **agile environment** with weekly sprints, daily standups, and close collaboration with product, design, and QA teams.
- Handled **App Store and Play Store submissions** including release notes, metadata optimization, and compliance with platform guidelines.
- Built **offline-first data sync mechanisms** ensuring seamless user experience even on low-bandwidth networks across tier-2 and tier-3 cities.
- Collaborated with backend engineers to design **efficient RESTful API contracts** and optimize network call patterns for mobile.
